

# How to Read the Hazard Map

## Color Coding by Category

Three types of hazard maps are included: **RED** for Sediment Disasters & Reservoir Flooding, **BLUE** for River Flooding & Stormwater Flooding, and **GREEN** for Tsunamis & Storm Surges. **BLUE/GREEN** maps are not included for zones where river/stormwater flood damage is not expected, or there is no tsunami/storm surge danger.

## Projected Scenarios for Each Category

### SEDIMENT DISASTER (Landslide, etc.) (Sediment Disaster Hazard Zones / Sediment Disaster Special Hazard Zones)

Boundaries of hazard zones designated by Ehime Prefecture in accordance with the Sediment Disaster Prevention Act are indicated for each category of sediment disaster. Sediment Disaster Hazard Zones (Yellow Zones) indicate areas where the lives and wellbeing of residents, etc. may be at risk in the event of a disaster such as the collapse of steeply sloped ground. Sediment Disaster Special Hazard Zones (Red Zones) indicate considerable risk to the lives and wellbeing of residents, etc. with buildings facing risks of damage or destruction.

### RESERVOIR FLOODING (Key Reservoirs for Disaster Management / Expected Reservoir Flooding Inundation Zones)

Expected inundation zones in the event of reservoir collapse during times of flooding are overlaid, indicating zone boundaries and maximum inundation depths for key reservoirs for disaster management in 299 locations.

\* To see inundation depths for specific reservoirs, check the Reservoir Hazard Map.

### RIVER FLOOD (Expected Flood Inundation Zones / Maximum Inundation Depth)

Expected flood inundation zones in the event of rainfall at maximum expected levels (once-per-1,000-years levels) as announced by river administrators in accordance with the Flood Control Act are overlaid, indicating zone boundaries and maximum inundation depths.

(Expl.) **Expected Flood Zone with Destruction of Houses, etc.**

Indicates zones where ordinary buildings are at high risk of being destroyed, swept away, etc. in the event embankments in the vicinity collapse due to an occurrence of the maximum expected level of rainfall. These zones fall into two categories: those due to direct risks of flowing flood waters, and those due to the erosion of riverbanks.

- Expected Flood Zone with Destruction of Houses, etc. (Due to Flood Flow) ... Zones where wooden houses are at risk of being swept away/destroyed due to flowing flood water
- Expected Flood Zone with Destruction of Houses, etc. (Due to Riverbank Erosion) ... Zones where houses are at risk of being swept away/destroyed due to flood-induced erosion of riverbanks

\* To see detailed inundation depths and durations of inundation for specific rivers, check the Matsuyama Flood Hazard Map.

### STORMWATER FLOODING (Expected Stormwater Inundation Zones / Maximum Inundation Depth)

Expected stormwater inundation zones in the event of an occurrence of heavy rain with total rainfall of 299 mm and maximum hourly rainfall of 83.5 mm are shown, indicating zone boundaries and maximum inundation depths.

\* To see detailed inundation depths, check the Matsuyama Stormwater Hazard Map.

### TSUNAMI DAMAGE (Tsunami Hazard Zones / Maximum Inundation Depth [Standard Water Level])

Tsunami hazard zones designated by Ehime Prefecture in accordance with the Act on Regional Development for Tsunami Disaster Prevention are shown, indicating zone boundaries and standard water levels.

### STORM SURGE DAMAGE (Expected Storm Surge Inundation Zones)

Boundaries of expected inundation zones in the event of storm surges of the largest expected potential level as announced by Ehime Prefecture in accordance with the Flood Control Act are indicated.

\* To see detailed inundation depths and durations of inundation, check the Matsuyama Storm Surge Hazard Map.

#### • Projections Based on Largest Recorded Typhoons

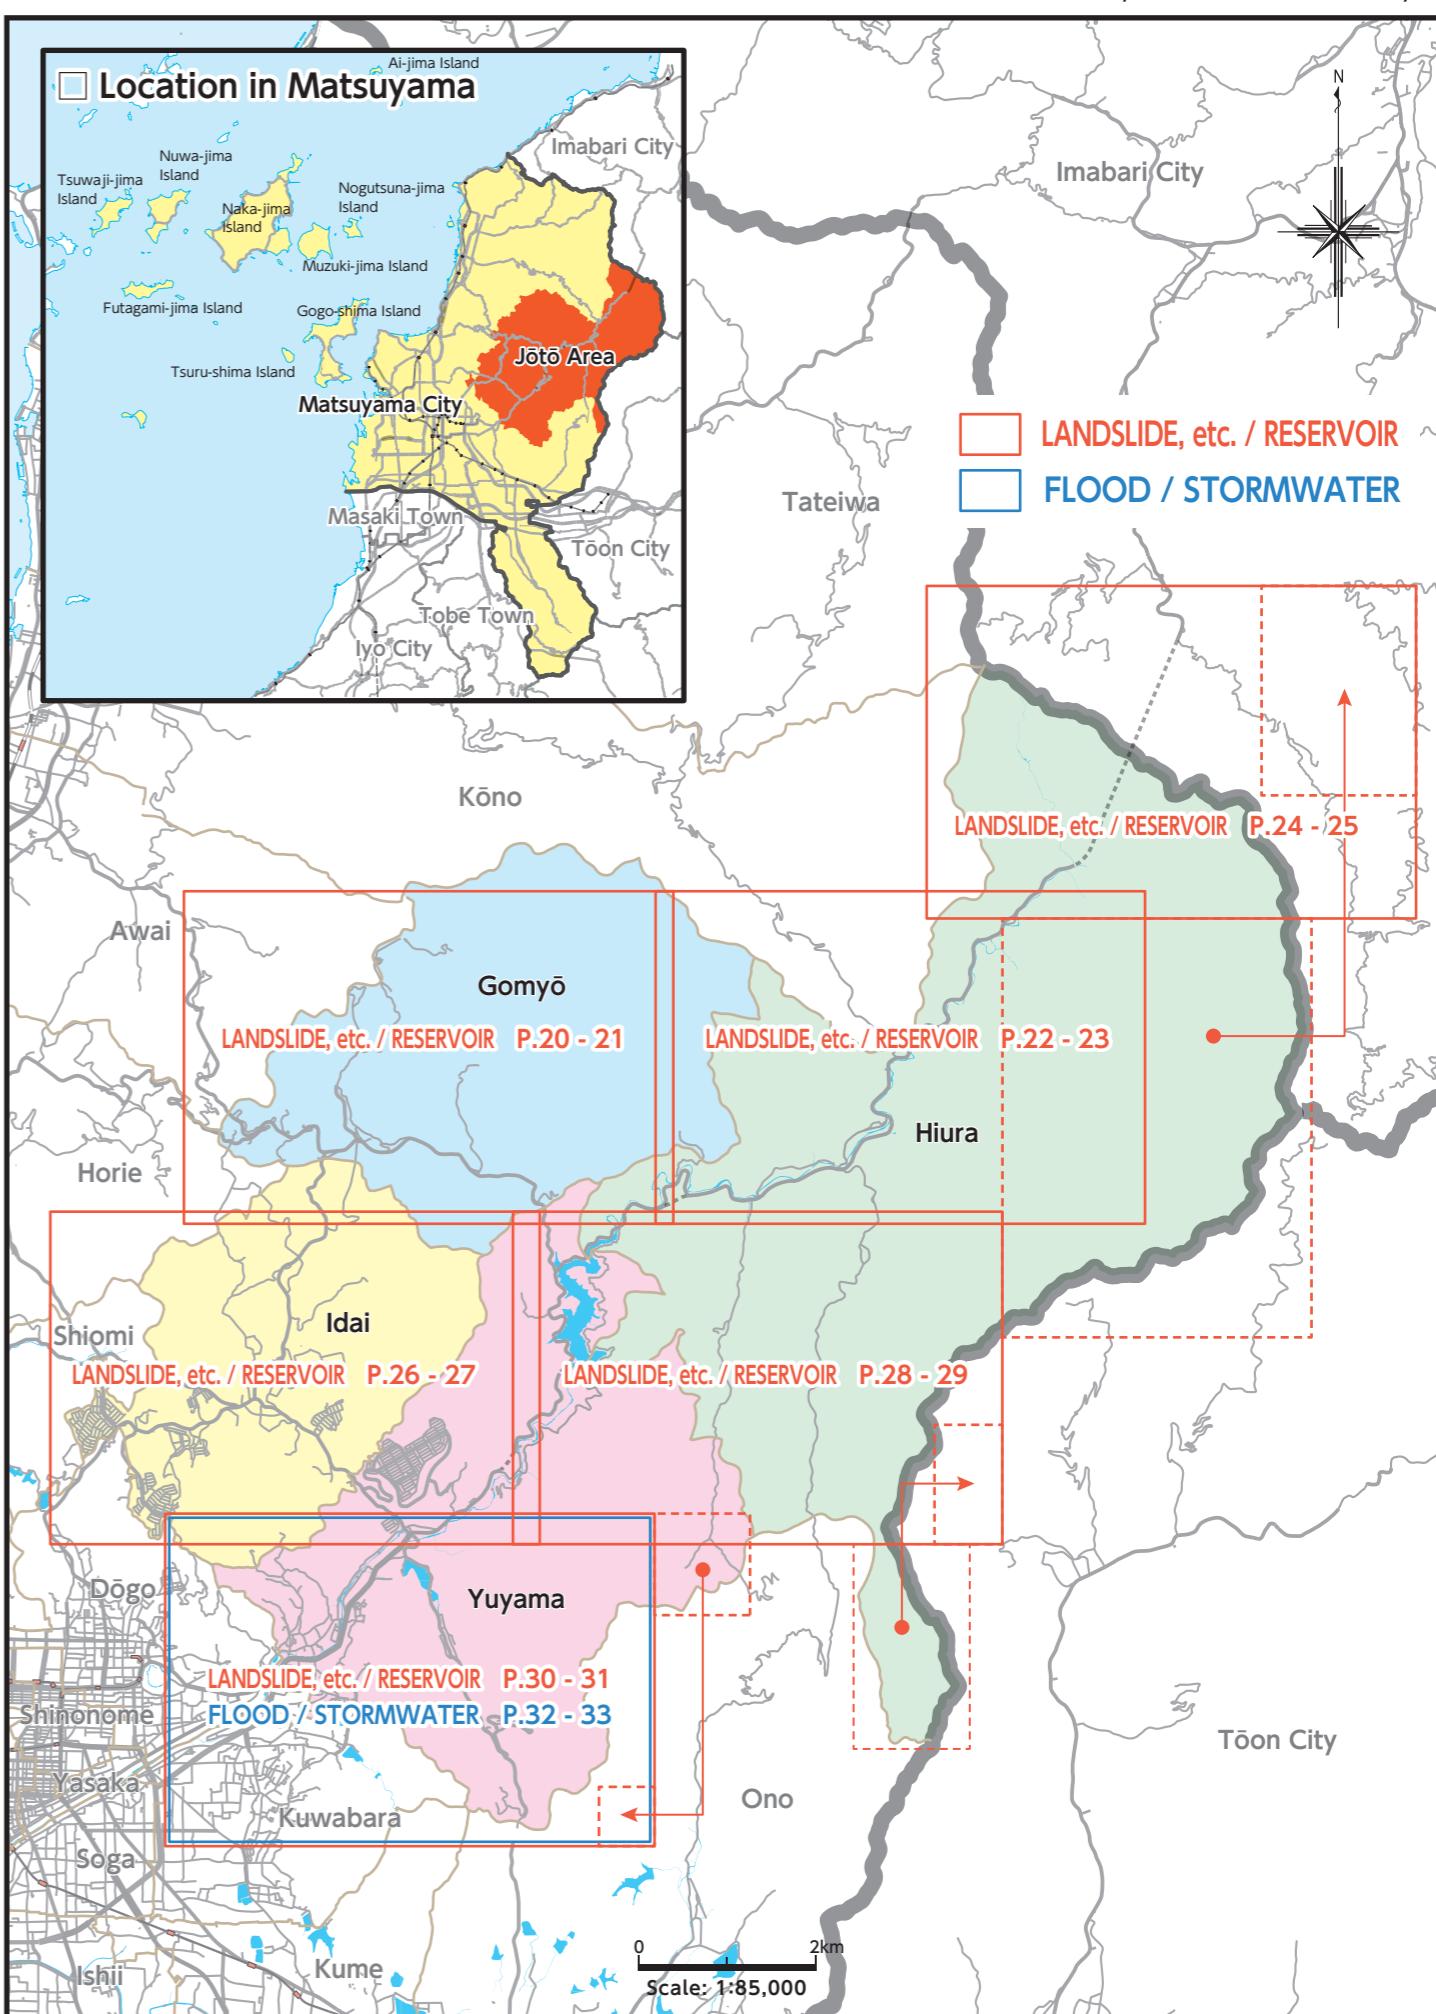

- Central pressure 900 hPa(Equiv. to 1934 Muroto Typhoon)
- Radius & velocity Radius of maximum cyclostormic wind: 75 km\*  
(Equiv. to 1959 Isewan Typhoon/Typhoon Vera)
- Velocity: 75 km/h(Equiv. to 1959 Isewan Typhoon/Typhoon Vera)

\* Radius of maximum cyclostormic wind: Distance from the center of a typhoon to the point near the typhoon with the highest wind speed

While this Hazard Map has been created based on the latest digital map data (basic national geospatial data) published by the Geospatial Information Authority of Japan (GSI), please be aware that certain locations may not correspond with actual current conditions due to changes over time. With regard to hazard information for sediment disasters, etc., the map is meant to serve as an approximate general reference only, and is by no means representative of exact or specific limits of the boundary, scope, etc. of hazard zones, etc. Please also note that listed disaster management information, including evacuation shelters, etc. is current as of Jan. 2022, and may be subject to change in the future. Please refrain from reproducing or reprinting this publication's cover, contents, or maps without the consent of Matsuyama City.

## INDEX MAP

[ Yuyama / Hiura / Idai / Gomyō ]

Jōtō Area  
20  
LANDSLIDE etc. / RESERVOIR

- Designated Emergency Evacuation Site \*
- City Hall / Branch Office
- Police Station Kōban / Chūzai-sho
- Emergency Helicopter Landing-pad
- Emergency Transportation Route
- National Road 11
- Prefectural Road 19
- Designated Evacuation Shelter \*
- Fire Station / Branch
- Emergency Medical Facility
- Underground Shopping Center / Underpass
- Major Evacuation Route
- Bank / Shinkin Bank
- Post Office
- Welfare Evacuation Shelter
- Civilian Firefighters' Pump Storage
- Emergency Broadcast System (Announcement / Siren)
- Payphone (outdoors)
- Fire Station
- Intersection Name
- Shrine
- Temple

(Sediment Disaster Hazard Zones / Sediment Disaster Special Hazard Zones)

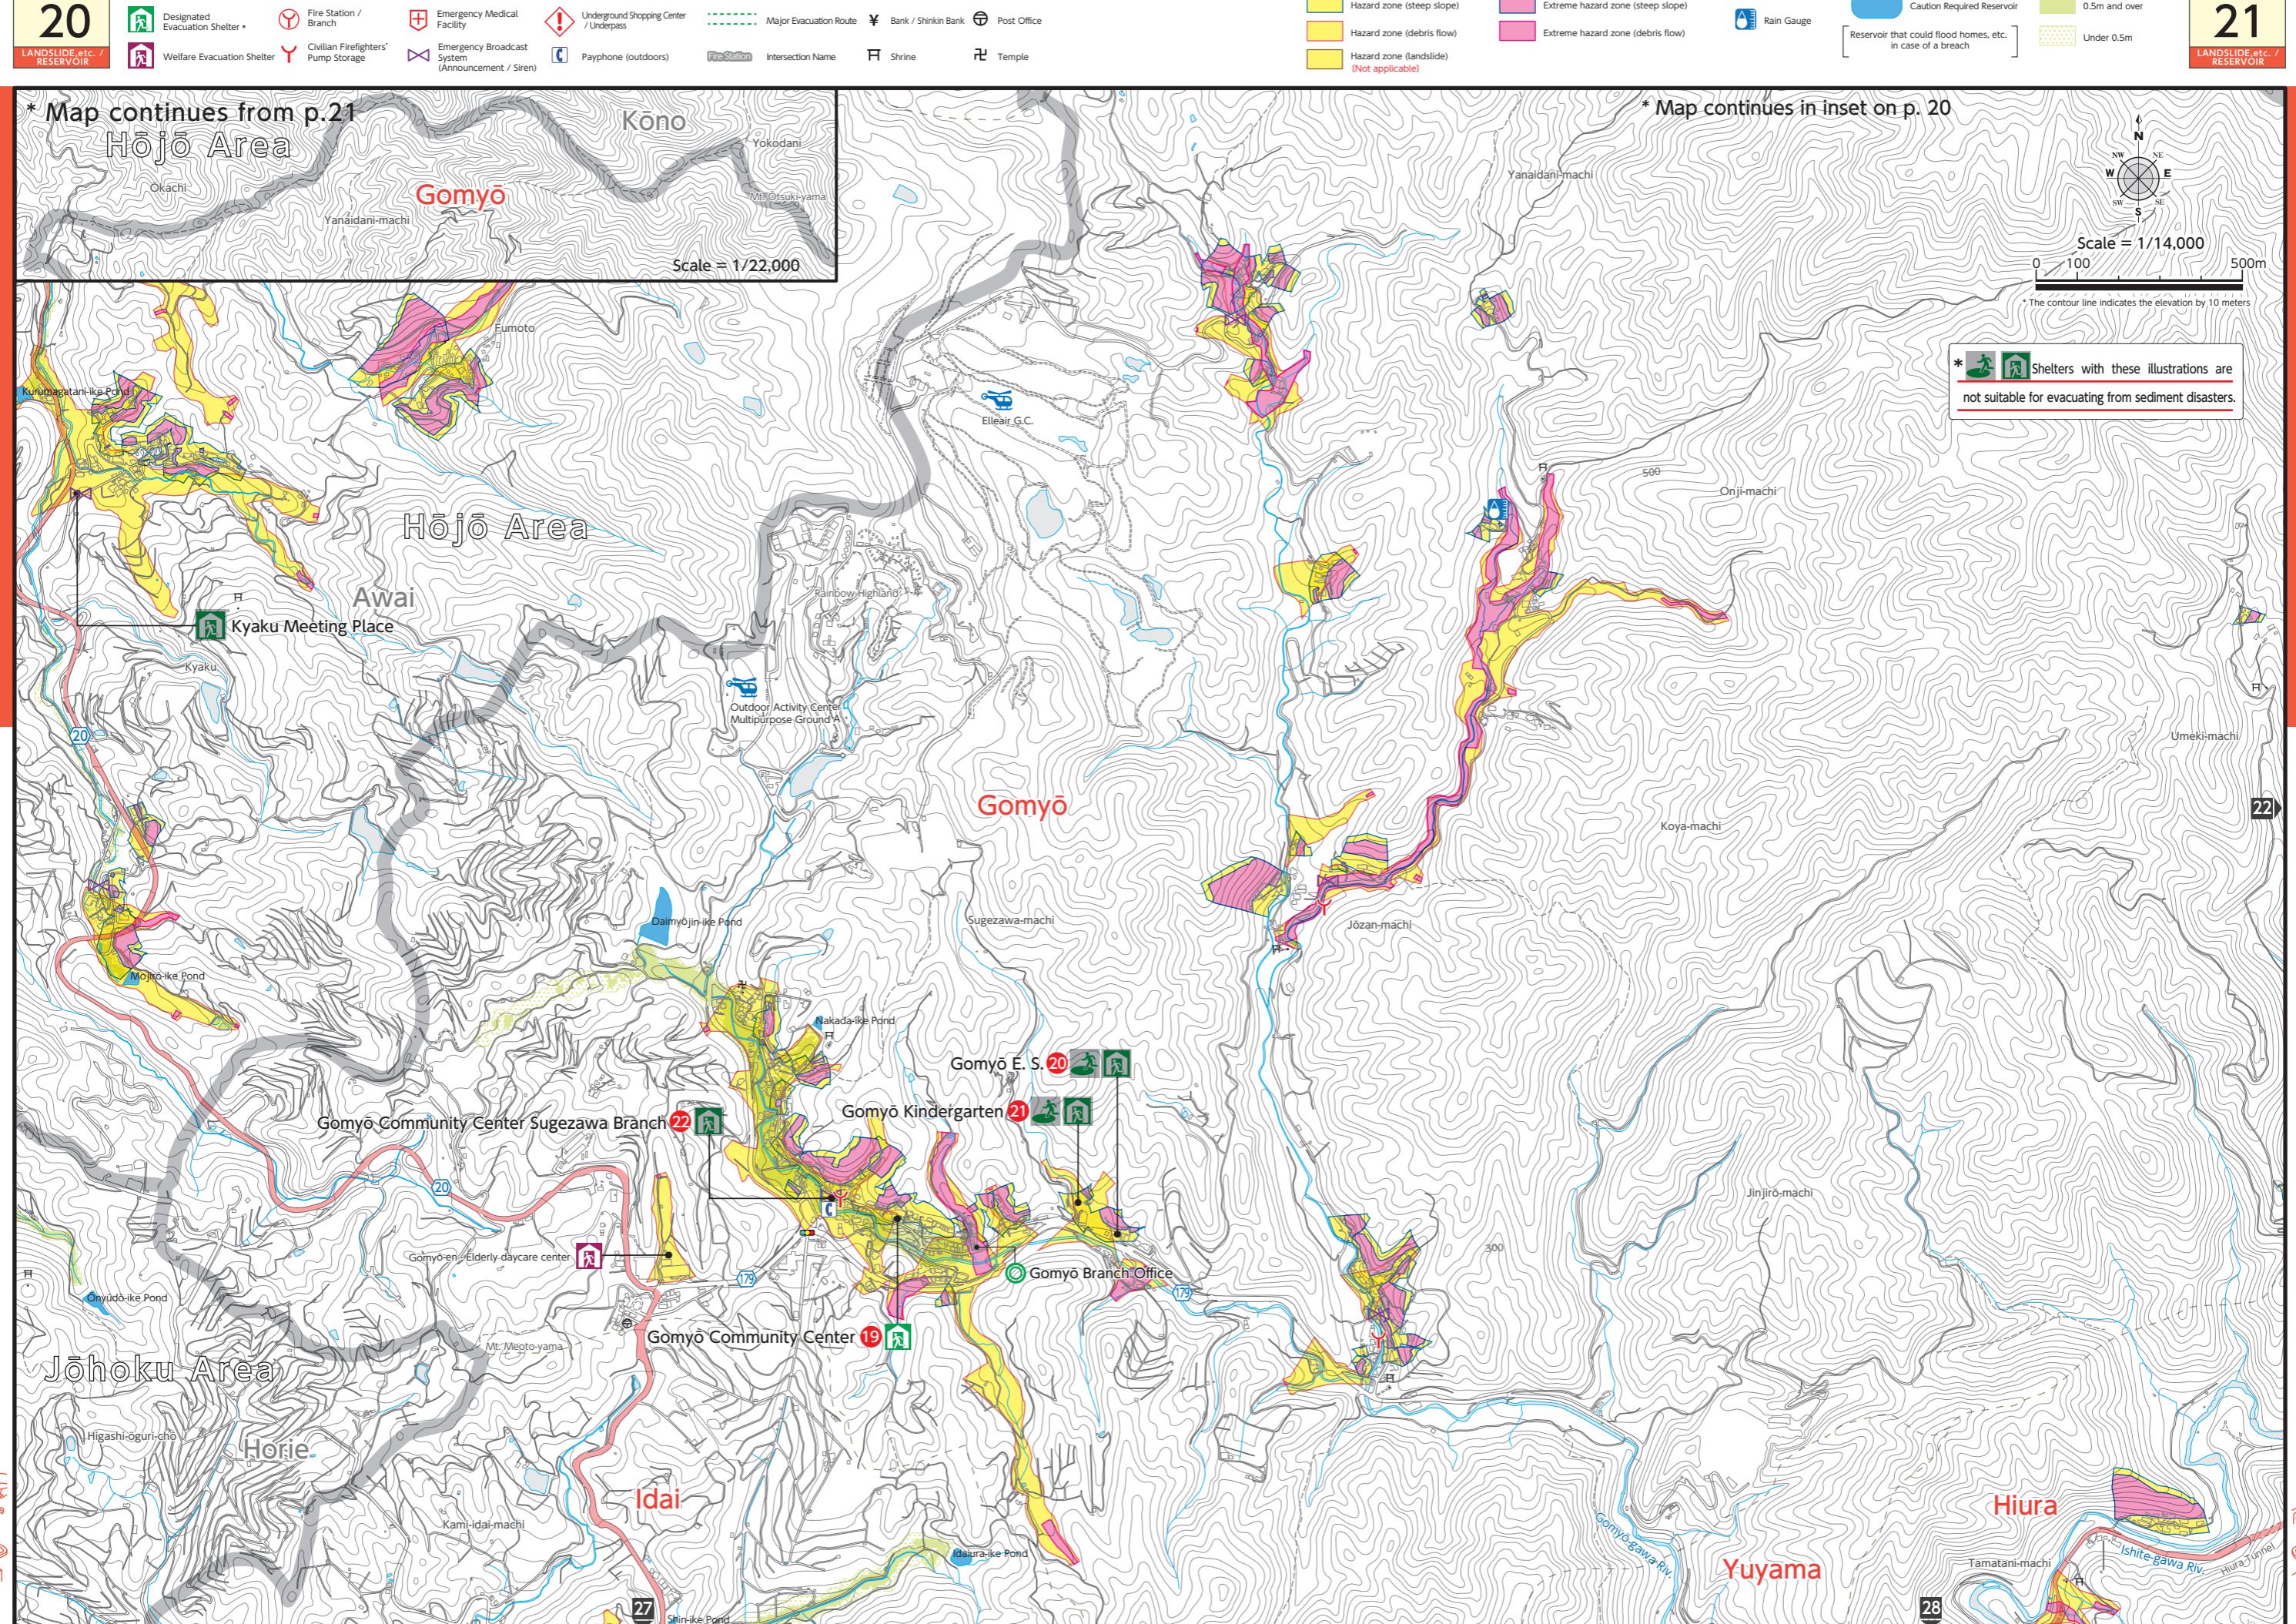

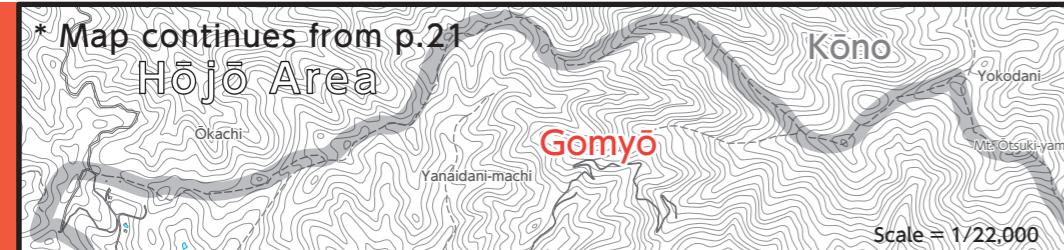

Hazard zone (steep slope)	Extreme hazard zone (steep slope)
Hazard zone (debris flow)	Extreme hazard zone (debris flow)
Hazard zone (landslide)	Hazard zone (landslide) (Not applicable)

(Caution Required Reservoirs / Expected Reservoir Flooding Inundation Zones)

Rain Gauge	Caution Required Reservoir	0.5m and over
Reservoir that could flood homes, etc. in case of a breach		Under 0.5m

Jōtō Area  
21  
LANDSLIDE etc. / RESERVOIR

Idai / Gomyō

Jōtō Area  
22  
LANDSLIDE etc. / RESERVOIR
